GRANT APPLICATION STEP 1 - PROJECT BASICS

Project Title:

ANN KODE

Amount Requested:

$4,063.79

WC Application Type:

IGP

WC Partnership Type:

HELP

Project Primary Focus:

Education

Project Secondary Focus:

Economic Opportunity

Accelerator Grants Competition Focus:

Country:

Haiti

Region/Province:

South

District/Department:

Nearest Town/Municipality:

Les Cayes

Village/Community:

Rue Mgr Collignon

Language/s spoken locally:

Creole/ French

Locate the community on Google Maps (as best you can) and share the link, or tell us exactly what to search for:

18.19683284827414, -73.75744128279621

GRANT APPLICATION STEP 2 - PROJECT PARTNERSHIP

A. Community Organization

Name of Community Organization:

AJNDF(Association des Jeunes Novateurs de Derrière-Fort)

Where specifically is the Community Organization based?

Les Cayes, South, Haiti

Community Organization's website or website where we can learn more about your work (if available):

What year was your community organization founded and what is its origin story?

The association AJNDF has been founded in November 2015. The idea of that group results in the need that occurred by the lack of connection between the young of Les Cayes, specifically Derriere Fort. Before 2015 we've never had some activities between the young people of that community, even for the most important days. So it was more than necessary that we come up with a solution to overcome this situation. So on November 2015, we've call all the young people of Derriere Fort to take part in cleaning and decorating the street. And years later, we've kept that use, and added some extra activity. This how we've created the association AJNDF.

What are your organization's current programs/activities?

As AJNDF is an association of young people, so our main activities turn around how young people can progress in their life, how we could help them taking in hand their destiny, how we could help them find the right path for their future. To achieve that goal we organize, a series of discussion about subjects that are important for their future like leadership point that can improve their way of thinking and their dreams, professional orientation to help them make a right choice in their career, clean up streets and others.

Is your organization legally registered?

No

The process of registration has already started, we're waiting for everything to be setup For this moment we aren't registered yet, and it does not have any problem on our project and its sustainability. But soon we'll get registered even before we could go further with the project.

Does your organization have an elected governing body?

Yes

AJNDF's representatives are among 5 people that are elected and constitute the committee of the association. This election takes place each year, and all the members of the groups take part in it. To be elected in one of the position one must have 50% + 1 of the vote. For this moment the committee is formed by :1- Widly JULES: President, 2- Elie Mickerlange Junior: Treasurer, 3- Sergine Suzie OSSON : Secretary, 4- Gandhi Elie Dolph : Public Affair officers, 5- Olguine MOROSE: Marketing responsible.

Do women hold 50% or more of the leadership positions within the organization? Please describe the number and types of positions held by women.

No

Women don't hold 50% or more of the leadership positions whitin the association. But in our activities women have the same right as anyone. In our committee women can access any leadership position.

Has this organization ever received a grant from an international organization?

Does your organization have a bank account with more than one authorized signatory?

No

We do not have a bank account with more than one authorized signatory. To manage our finance we first of all use account of responsible people in the committee. That person is responsible of desposit and witdraw for the organization. And obviously that person is our treasurer, Elie Mickerlange Junior.

Is the organization affiliated with the government at any level?

No

We aren't affiliated with the government. But sure we'd like to have their support for our entire project. Because it will be very significant and we'd have had many more mean to reach more young people in our projects.

B. Local Leader

Local Leader First Name:

Sergio Suzerain

Local Leader Middle Name:

Local Leader Last Name:

OSSON

Local Leader Date of Birth:

1/9/1998

Local Leader Gender:

Male

Local Leader Local Address:

154, Rue Capitale Prolongee, Les Cayes

Local Leader Email:

sergioosson@gmail.com

Local Leader Phone:

(509) 42 91 74 09

Local Leader's Highest Level of Education:

Bachelor's Degree

Please provide a rationale for why the Local Leader is qualified to lead this project, listing any additional relevant experience, skills or certifications:

Sergio Suzerain OSSON was born and grew up in Les Cayes, and has since lived here for 18 years. He's accomplished his classic study at College Saint Jean des Cayes, where he's excelled with brilliance. His classic studies fees has been paid by his parents, they have done all what they can to send him in one of the greatest school in Les Cayes. Sergio was so excellent that he was eligible to apply for HELP scholarships when it came to go at university. Osson is a full motivated young, plain of leadership. He started the appliance of his leadership style at his school by organizing activities for pupils, like genius debate, Christmas party, philosopher day commemoration. He's continued in his town, he came up with the idea of creating a group of young people, to help them think positively and be involved in the activity of their community, that group's name will become AJNDF. Sergio is really involved in the fact of helping disadvantaged people in having access to technology. For the moment, he is taking part in a tutoring project at Cite Soleil, Port-au-Prince in an organization called SAKALA. Now Sergio is studying Computer Science and he wants to help the people of his home town in having access

to how to create their own technology, so they can follow the growth of the technology, and can bring their own participation.

C. Established Field Partner

First Name:

Francine

Middle Name:

Last Name:

Paul

Date of Birth:

6/26/1992

Gender:

Female

Local Address:

Avenue Cartagena, Les Cayes

Email:

francinepaul12@gmail.com

Phone:

(509) 36 15 5260

Highest Level of Education:

Bachelor's Degree

Please provide a rationale for why the established field partner is qualified to participate in this project, listing any additional relevant experience, skills or certifications:

Francine PAUL is a courageous woman born in Les Cayes. She accomplished her classic studies in that city, specifically at Ecole Notre Dame du Perpetuel Secours and College Frere Fabien Caron. She grew up in Les Cayes and she was granted the Haitian Education and Leadership Program scholarship due to her great performances shown at school. She is a fresh graduated woman. She has always been eager to help young people. Moreover, she started while she was at secondary school, helping other children having their grade. When at HELP she helped disadvantaged student, teaching them how to read. She has participated in activities at HELP that aim to protect the civil rights of people call ADDM (ansanm pou defann dwa moun). Now she feels like it is a responsibility for her to help the young people of Les Cayes to get a deep understanding of what technology is by teaching them how to program computers.

Have you ever received a grant from an international organization?

How long have you been living and/or working in the primary project site?

She has been living here for 198 months and left in 2012 for university. However, she stayed deeply connected with her hometown by providing any support that she can.

When do you expect to no longer be living and/or working in the primary project site?

She will always be connected with the primary project site, because she has her family, friends and known people. In addition, she believes in the potential of the young in that city, and is always working to bring new opportunity for them.

GRANT APPLICATION STEP 3 - PROJECT DESIGN

When will this project start and what is its estimated duration in months?

The project will start in July 2018 and is estimated to last 2 months.

What is the proposed project, and how will it be implemented? Who will it benefit directly, and why is it important to them? Be specific, we need to clearly and practically understand what you intend to do with a grant from World Connect.

AN'N KODE is a coding bootcamp will be organized in the city of Les Cayes, which aims to train 40 young people of that city in programming computer, creating web application. This project core value is to show young man and woman how they can build awesome resources by working together and increase their capacity to think and solve challenges, by helping each other in their difficulty. Moreover, they would be able to integrate the technology by conceiving their own application.

Please provide a description of the affected community/ies as it relates to this project. Focus on characteristics such as the number of people and households, climate and topography, distance to the nearest schools and health facilities, sources of local employment/income, and tell us about any marginalized populations locally.

This project will affect young people from the community of Les Cayes, often referred to as Aux Cayes (Haitian Creole: Okay), is a commune and seaport in the Les Cayes Arrondissement, in the South department of Haiti, with a population of 71,236. Due to its isolation from the political turmoil of the capital, Port-au-Prince, it is one of Haiti's major ports, with export trade concentrating on mostly coffee and sugarcane. As the world's largest supplier of vetiver, it exports 250 tons annually of this ingredient of perfume and fragrance manufacturing. Minor exports include bananas and timber. We are targeting a group in the age range of 15 to 25 years. The project will be hosted by a school in the locality of Les Cayes with a computer lab that can accommodate a group of 50. Around the school we have a clerkship several other schools, a dental clinic, a non-governmental organization OMI (Oblates of Mary Immaculate Conception).

Please describe daily life for the individuals who will participate in your proposed project.

Jimmy Cardona is a young from Les Cayes. He was born and grew up there. He lost his mother since his childhood and left school due to a lack of money to pay his school fees. In his days, Jimmy use to stay at his house doing nothing. Sometimes he starts his day trying to get some cash, but sometime all are in vain. Through ANN KODE the possibility will be offered to Jimmy to have a way to earn his life by working as a programmer, creating web application.

How was the project determined as a priority by the community? Please specify how women were involved in this process.

The city of Les Cayes has a brilliant youth, which is able to work on anything; they are motivated and strong enough to work on any field. This can be seen in the result of the official exam. There are always more than 4 young people coming from Les Cayes in the top ten. However, one of the major

issues we have been pointing out, iKod a group of young people studying computer scientist, is that that youth does not involve them in the technology. They rather use it, as if they were really not interested on the how things are been built, what's happening under the wood. So following this conversation we've found out the best way to help them overcoming that situation is to show them how they can create their own technological product, how they can be creative, how they can use their imagination. And in the field of technology when you are talking about creativity you mean programming. This lack of imagination and technology inclusion implies a low level of technological activity in the city of Les Cayes.

Describe in detail the roles and responsibilities of each of the key actors below in<u>the design and implementation</u> of the project.

Community Organization: AJNDF(Association des Jeunes Novateurs de Derrière-Fort)

AJNDF will be the main group responsible to manage the activity related to logistic and food. They will provide the volunteer for that.

Local Leader: Sergio Suzerain OSSON

The project leader role is to ensure that our scheduled activity is respected and we are on time with the activity settled in all the days. He needs to keep in touch with all the people in Les Cayes who are helping us in the activity. However, he needs to have an eye on almost everything related to the project. His last and most important usage in the design and implementation of the project is to ensure that our specific goals are accomplished in the required environment.

Established Field Partner: Francine Paul

As the established field partner, Francine will be responsible to drain the information on the progress of the project to world, connect. She will ensure that the project fit well the mission that world connect is seeking for.

Community Members:

Describe in detail the roles and responsibilities of each of the key actors below in*managing and ensuring transparency of the finances* for the project.

Community Organization: AJNDF(Association des Jeunes Novateurs de Derrière-Fort)

AJNDF as the key organization related to this project, will be responsible to control the entrances of the project and get the accreditation for all

kind of stuff related to logistics.

Local Leader: Sergio Suzerain OSSON

The project leader will play a key role in managing the budget of the project. He needs to know correctly how much everything requires being setup for the project to be almost exact in predictive budget. And AJNDF could save his resources.

Established Field Partner: Francine Paul

Francine will be responsible to make the follow up concerning the expenses, and to keep eyes on the receipt, and let them be easily accessible to world connect.

Community Members:

How does the project build upon the efforts of the local community and/or other locally-led groups, such as neighborhood associations, women's groups, health clinics, local government, etc., which are not the listed Community Organization partner on this application?

This project aims an educational scope. That is why, easily we have a bunch of people from Les Cayes who are willing to bring their own contribution to this project. First, we have the College Saint Jean who is eager to support us by letting us use his laboratory and his own electricity generator. Second, we have a group of university student in Les Cayes who wants to share with these young man and woman their knowledge in the field of programming. And there are young people in the AJNDF group who want to volunteer in the activity to manage things such as required food for each of the sessions we will have in the bootcamp.

What are your sustainability strategies for this project? For example, five years from now, what will remain, who will be responsible for what remains, and what ongoing costs do you foresee?

One of the biggest objectives of the project AN'N KODE is to create a community of young computer programmer in the city of Les Cayes. So as a community the most important is to be linked together, to help each other and give the opportunity for others to integrate the group and share the same value with us. This is the main way our project will be sustained. By the community that will be resulted from the bootcamp. The individual action of each participant will have a considerable impact on how the other young people who do not have any knowledge in programming will be influenced and join our community for the best. However, it will be possible for us to go in the other city to spread the habit of grouping young man and woman to create community of programmer.

How does the community, particularly women, define success for this project? Please list their three most important success indicators. Describe how each of these indicators will be measured and by whom.

- For our project, first indicator that can measure success is the number of people in Les Cayes that are supporting us, willing to participate actively with us. This will mean they needed this activity a long time ago and though it is necessary for them to keep it on the go. - Second indicator is how many of our beneficiaries that are still working on project given to them, or created their own project to keep learning programming even after the bootcamp has finished - The last one is very important because it measures the necessity of creating web resources for businesses in the city. And it measures the average of money beneficiaries of the bootcamp are winning by working on what they've learned.

What will be the impact of your project on the community, and specifically on women? What will it change for the community, and specifically for women?

The first impact will be on the life of these young, the will have the opportunity to create new incomes. For the city of les Cayes, people and businesses will have programmer available to overcome their needs in that field. In addition, they will have opportunity to expand their activity through web site that these young people will create for them. This project will show to people of Les Cayes and it surrounded how women can easily adapt themselves to technology. They will have the possibility to show what they can do else other than the stereotype assigned to them more often. Personally, women will develop themselves, and open their mind to the outer world.

Is there anything else we should know that will help us in make a decision about partnering on this proposed project?

One of the things that we want to point out, is that this activity will be done for the first time in Les Cayes. We want to bring a new thing in that city, so other people could follow us and help many more young man and woman in learning technology.

GRANT APPLICATION STEP 4 – PROJECT BUDGET

Exchange Rate

1 USD = 64.36 Haitian Gourde (HTG)

Budget Summary

Category	Grant Request (USD)	Community Cash (USD)	Community In-Kind (USD)
Labor	$1,817.53	$1,182.22	$0.00
Equipment	$0.00	$0.00	$0.00
